Post-test questionnaire

These are a list of questions we would like you to answer after having tried our product. Please be as detailed and descriptive as possible.

In your own words what did you just experience? *

Game that changes when you smile

What changed in the scene? *

rain became sun. when sun music where playing.

If you noticed changes, did you feel in control of the change?

Yes

No

Other:

Final Questions

On scale of 1 to 10, how responsive did you feel the weather system was to your facial expression? *

1 2 3 4 5 6 7 8 9 10

Not at all responsive Very responsive

How smooth did you feel the transition was in the scene? *

1 2 3 4 5 6 7 8 9 10

Not smooth at all Very smooth

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

No not really.

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

I would be fine with it if it was local but would not use it

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expresions other than smile/frown? *

Yes

No

If yes, what expressions?

mad. open mouth

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

I am having a hard time image it work for real life TV

Thank you for participating in our test and answering our questionnaire.

We appriciate you :) <3.

Post-test questionnaire

These are a list of questions we would like you to answer after having tried our product. Please be as detailed and descriptive as possible.

In your own words what did you just experience? *

A changing environment based on my facial expressions

What changed in the scene? *

the weather and sounds, also light settings of the environment

If you noticed changes, did you feel in control of the change?

Yes

No

Other: Mostly yes, but the prototype is not super-sensitive yet :)

Final Questions

On scale of 1 to 10, how responsive did you feel the weather system was to your facial expression? *

1 2 3 4 5 6 7 8 9 10

Not at all responsive Very responsive

How smooth did you feel the transition was in the scene? *

1 2 3 4 5 6 7 8 9 10

Not smooth at all Very smooth

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

That depends on a bunch of things, but rather no

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

Yes

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expresions other than smile/frown? *

Yes

No

If yes, what expressions?

being sad

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

Yes if it could run entirely offline.

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

Yes

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expresions other than smile/frown? *

Yes

No

If yes, what expressions?

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

Well it's certainly interessting. It reminds of games with multiple endings such as Detroit becomes human. In this case people would discuss their different outcomes, but also discuss how they got there. So a potential issue would be that people would force outcome by faking expressions.

Thank you for participating in our test and answering our questionnaire.

Post-test questionnaire

These are a list of questions we would like you to answer after having tried our product. Please be as detailed and descriptive as possible.

In your own words what did you just experience? *

A 3D environment where the weather and atmosphere changes with my facial expression

What changed in the scene? *

The weather (rain fog clouds), and the sounds of thunder and bird song

If you noticed changes, did you feel in control of the change?

Yes

No

Other: It had difficulty recognising my smile (maybe include eyes?)

Final Questions

On scale of 1 to 10, how responsive did you feel the weather system was to your facial expression? *

1 2 3 4 5 6 7 8 9 10

Not at all responsive Very responsive

How smooth did you feel the transition was in the scene? *

1 2 3 4 5 6 7 8 9 10

Not smooth at all Very smooth

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

Yes

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

Yes

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expresions other than smile/frown? *

Yes

No

If yes, what expressions?

As it had difficulty recognising my smile, I tried things like wide open mouth which it recognised.

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

Very interesting! I'd love to see it - although I would be worried about the direction of tone in the scene in terms of scenography.

Thank you for participating in our test and answering our questionnaire.

We appriciate you :) <3.

Post-test questionnaire

These are a list of questions we would like you to answer after having tried our product. Please be as detailed and descriptive as possible.

In your own words what did you just experience? *

Pretty cool proof of concept, where I could control the weather trough my smile.

What changed in the scene? *

The weather and time of day

If you noticed changes, did you feel in control of the change?

Yes

No

Other:

Final Questions

On scale of 1 to 10, how responsive did you feel the weather system was to your facial expression? *

1 2 3 4 5 6 7 8 9 10

Not at all responsive Very responsive

How smooth did you feel the transition was in the scene? *

1 2 3 4 5 6 7 8 9 10

Not smooth at all Very smooth

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

Most likely not.

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

Perhaps, I need to manually verify that.

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expresions other than smile/frown? *

Yes

No

If yes, what expressions?

sadness

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

I can see the appeal, but for me, that could actually lead to total fragmentation of the underlying story \ plot , where "the same episode (say episode 4) would have had been completely different for both me and my friend. I'm not quite sure how much of an enjoyment could I have knowing that the show doesn't follow a linear narrative, but it is in fact, over the full sample of viewers, essentially all over the place. I think the technology is really cool, but its applications need to be carefully planned and rethought.

Thank you for participating in our test and answering our questionnaire.

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

no, this is why i dont know a smart tv or use smart phones and put tape over the webcam and mic on my laptop and block the m

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

no, i dont do recordings or picture taking, not even in private

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expressions other than smile/frown? *

Yes

No

If yes, what expressions?

frown, neutral (which also gave the raining experience)

How intutive did you feel the program was to use? *

1 2 3 4 5 6 7 8 9 10

Not intutive

Very intutive

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

im not sure that is actually a good thing, like if you had a different experience then it could be harder to discuss some parts of the show, e.g. the zombie fight at night in the last (shitty) season of GoT, that looked pretty cool in night and that experience would probably have been ruined if it was shot in bright daylight (even though attacking the zombies with horses outside of a castle is idiotic)

Thank you for participating in our test and answering our questionnaire.

We appriciate you :) <3.

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

Sure

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

Sure

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expresions other than smile/frown? *

Yes

No

If yes, what expressions?

Mouth expressions (open, frantic smile, angry smile)

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

Depends on the role of the implementation. I would rather than the director has full power, if it is a normal movie. If immersive VR, i may be different, because so many aspects are different from at conventional movie watching.

In your own words what did you just experience? *

An animation of a dronelike camera moving through a forest area where something changed whenever I smiled.

What changed in the scene? *

Sound and light

If you noticed changes, did you feel in control of the change?

Yes

No

Other:

I felt only a bit of control because I think I could only choose when the change would happen but not what the change would be

Final Questions

On scale of 1 to 10, how responsive did you feel the weather system was to your facial expression? *

1 2 3 4 5 6 7 8 9 10

Not at all responsive Very responsive

How smooth did you feel the transition was in the scene? *

1 2 3 4 5 6 7 8 9 10

Not smooth at all Very smooth

Would you feel comfortable being recorded while watching a movie at home, knowing that the video will never be seen by a human being? (The data would be used to optimize the program and only stored short term in a cloud server, and then deleted) *

Yes

Would you feel comfortable being recorded if the data was never stored and only analysed in the running live video feed? (not stored or sent anywhere, not even to a local cloud) *

Yes

How would you rate the experience on a scale from 1 to 10? *

Did you try any other facial expressions other than smile/frown? *

Yes

No

If yes, what expressions?

Open mouth, frown, and probably more I don't remember

How intutive did you feel the program was to use? *

1 2 3 4 5 6 7 8 9 10

Not intutive Very intutive

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

Very interesting, would be awesome if implemented!

Thank you for participating in our test and answering our questionnaire.

We appriciate you :) <3.

Viste tænder

How intuative did you feel the program was to use? *

For the final question, imagine this software was implemented for a TV-show such as "Game of Thrones" every person would have a unique version of the episode. The next day you discuss the differences in the episode with your friends. What are your thoughts on this concept? *

Game of thrones would have an overcomplicated story, given that it runs over so many episode, meaning that one episode would have to have the new story drippled into the entirety of the story line. Unless of cause that you only change the wheather. I would find it interesting to discusse such changes, but do not considder this scenario realistic. It would fit better for a game, or a very short movie. However, in any scenario of using facial expression to change a movie/game, the interaction would feel forced to me, and I would be compulsed to try out every possible combination of facial expression, and would therefore have to re-iterate over the same experience again and again and again.
